## Index to the Rare Bits Newsletters about Threatened Species Work - 29. NEW SPECIES

## Vol., Date Page Conservancy

			29. New Species & Genetic Diversity Quotes
			genetic work has confirmed that it is a new species of freshwater fish unique to New Zealand. This fish is now known as the bignose galaxias but
49 Jun -03	17	Canterbury	is yet to be formally described
			Boundary Stream's biennial snail survey has shown a dramatic and surprising increase in <i>Powelliphanta</i> "Maungaharuru" snail numbers found
			in the Taraponui Snail Covenant on the Maungaharuru Range. As yet genetic testing has not been done, however based on morphological
		East Coast/	differences, the <i>Powelliphanta</i> found in the Taraponui Covenant and Cashe's Bush are likely to be a species or sub-species endemic to the
46 Sep -02	3	Hawke's Bay	Maungaharuru Range
		East Coast/	
47 Dec -02	9	Hawke's Bay	Pimelea prostrata var. erecta", or P. arenaria. Recent work seems to indicate that it is a separate taxon
		Nelson/	
36 Apr-00	16	Marlborough	A more recent find is an unnamed forget-me-not tag-named Myosotis "Flora".
		Nelson/	A gecko caught on alpine marble in the Cobb valley, Kahurangi National Park, is apparently similar to Hoplodactylus "Marlborough mini", with
44 Apr-02	16	Marlborough	the closest record being on the Nelson Boulder Bank. Genetic work may shed light on its distinctiveness
		Nelson/	Alpine geckos captured recently on stable scree slopes in Kahurangi National Park have herpetologists excited. They have an unusual feature, a
48 Apr -03	8	Marlborough	slit rostral scale, which is previously unrecorded. Specimens have been sent to Wellington for taxonomic and genetic analyses
		Nelson/	
47 Dec -02	15	Marlborough	newly discovered hebe, which appears to be confined to the alpine tops of Mt. Murchison in southern Nelson
		Nelson/	The population of mudfish is considered genetically distinct from other populations - reflecting about a 700,000 year separation time from the
51 Dec -03	13	Marlborough	nearest population to the south.
36 Apr-00	8	Northland	invertebrate investigations carried out at Waipu and Abbey Cavesrevealeda new genus of carabid quite unlike any other in New Zealand.
			Field inspection of 12 pastoral lease properties over the last summer turned up several exciting new species discoveries and extended our
			knowledge of the distribution of many othersTwo new species of spider were discovered near Lake Hawea An undescribed species of galaxias
50 Sep -03	15	<u> </u>	(Galaxias sp. D) was recorded at two new locations south-east of Alexandra and also near Tarras
39 Dec-00	16	Southland	a new Peripatus record was made It may be a new species.
50 Sep -03	17	Southland	newly discovered genus of caddis The genus belongs in the Hydrobiosidae family (a predominantly Gondwanian family)
			Dr Brett Gartrell (Massey University) has spent four days on Stewart Island disease screening skinks Brett has confirmed the presence of a new
55 Dec -04	18	Southland	species of protozoa from two of the skinks
			Planning is now in full swing for a second transfer of Archey's frog, this time from representative sites from the Coromandel. Auckland Zoo is
47 Dec -02	4	Waikato	hoping a purpose built facility may be ready early next year to house the three Coromandel sub-populations separately
36 Apr-00	12	Wanganui	An adult tree with alternate leaves on one branch was found at Paengaroa. So we're thinking of describing another new species.
38 Sep -00	8	Wellington	A new plant species has been confirmed from the northern Wairarapa.
			A small brotula fish was unexpectedly collected from Seal Island (Paparoa coast). It is either outside the known range of the brotulas (NE North
36 Apr -00	18	West Coast	Island & Fiordland) or is a previously undescribed species.
			'Cascade forest geckos': thought to be a previously undescribed member of the Hoplodactylus granulatus complexcould be a new species
52 Mar -04	20	West Coast	related to geckos found at Takitimu and/or Esperence Valley, Fiordland. It was first found during a skink survey of Cascade Plateau in 1999
54 Sep -04	13	West Coast	Powelliphanta: Of special interest is confirmation that snails collected at two, possibly three, of the sites are new species.
